Paris, the 29th september 2000

Object: CS-Cipher submission

This submission belongs to the category 1.c) Block ciphers Normal Legacy as the key length is between 40 and 128 bits and the block length is 64 bits.

The algorithm CS-Cipher has been developed by CS Communication & Systèmes in a partnership with two members of the Ecole Normale Supérieure Jacques Stern and Serge Vaudenay in 1998. Jacques Stern and Serge Vaudenay have accepted to release their rights on this algorithm to CS Communication & Systèmes. This algorithm has been presented at FSE in 1998 and a proof of the security of CS-Cipher appeared at FSE in 1999 by Serge Vaudenay. Finally, a challenge of a 56-bits key has been solved on the Internet in 2000.

Serge Vaudenay and Oualid Ammar have developed the source code. CS-Cipher belongs to CS Communication & Systèmes. CS Communication & Systèmes, the submitter, has patented this algorithm but the company is going to give up these rights.
